

**T**ired of your developer friends with video scanners bragging about the image processing they get from their Kofax board?

Embarrassed because you don't have the financial muscle to buy a bunch of dedicated IP servers to go with your SCSI scanner?

You don't have to take it anymore. Because Kofax felt your pain and made it possible for you to run your SCSI scanner on Adrenaline.

Have the best of both worlds. The best image processing in the industry. With features like deskew, deshade, line removal, bar code recognition, and more, without slowing down your scanner.

The results are dramatic, for your ego and your work. You'll produce images that are more readable, your OCR and ICR accuracy will increase and your file size will shrink.

Adrenaline hardware accelerators are available for any PCI bus machine and support most popular SCSI and video scanners.

For more information contact Kofax at (714) 727-1733, or visit our Web site at [www.kofax.com](http://www.kofax.com).

After all, information is power.
